

Specialists in Sludge Dewatering

Mobile/Rental – Dewatering, Thickening and Drying

Euroby operates a large fleet of mobile and semi-mobile dewatering and thickening decanter centrifuge and filter press units with throughputs of 15-120m³/hr. Our range of dewatering and drying equipment enables our experienced operators to successfully process the most difficult of materials from but not restricted to the water, municipal, food, pharmaceutical, petrochemical, brewing, animal feeds and tannery industries.

Our dewatering units can incorporate polymer dosing systems, munchers, lime and cake mixers, odour control and sludge pasteurisation processes. They are supplied as self-contained units on a bespoke trailer with pipe-work connections and cake discharge conveyors.

Centrifuges and Filter presses are supplied on a rental basis, for short-term emergency requirements, or for cost effective solutions in long-term projects. Specially designed equipment is also available for unique applications.

Euroby has the ability to supply within a short time-scale for large and difficult projects, often mobilising plant within a few days.
